1 "Recalls have not been issued."

2 Do you know what that relates to?

3 A As I look at this, it looks like
4 it's a recap of some of the concerns expressed
5 over the course of the investigation. So it
6 doesn't necessarily reflect the state of
7 affairs at that point in time.

8 Q Okay. So the bullet point that says
9 "Recalls have not been issued," are you saying
10 that that doesn't really reflect the state of
11 affairs as of May 20th?

12 A Correct.

13 Q Okay. The next bullet says:

14 "Health hazards related to recalls are
15 delinquent."

16 What does that mean?

17 A When you -- when there's a recall or
18 you're considering a recall or you are -- you
19 have a product that may be -- may potentially
20 be a recall, the company typically would look
21 for expert opinion, which they call a health
22 hazard assessment, as to the nature of what
23 the severity of the issue might be. And in
24 some cases, the health hazard assessment

Phyllis A. Lambridis
Confidential – Subject to Further Confidentiality Review

49

1 will -- might even tell you that there is no
2 issue. And it helps you to justify to FDA why
3 you may not do a recall.

4 In this particular case, we also --
5 companies would also do this because FDA is
6 the final -- makes the final determination on
7 the level of a recall, but a company would
8 typically do their own health hazard
9 assessment to try to work with FDA to minimize
10 the impact of what level of -- you know, to
11 determine what level, to talk with them and
12 get their own personal assessment.

13 So in this particular case, we had
14 done health hazard assessments on several of
15 the products that were the subject of recalls
16 that were in process; and they weren't
17 satisfied with all of the content, or some of
18 them were not timely.

19 Q Okay. So do you know whether one
20 was done for Digitek?

21 A I honestly don't recall.

22 Q Do you know who did the health
23 hazard analysis for Digitek if it was done?

24 A If it was done, it would have been

Phyllis A. Lambridis

51

1 Q Yes.

2 A I don't recall.

3 Q Then the next bullet says: "That
4 you put effective Quality Systems in place."

5 Do you see that?

6 A Yes.

7 Q And do you agree that as of May of
8 2008, there weren't effective quality systems
9 in place for Actavis Totowa?

10 MR. DEAN: Object to the form.

11 Go ahead.

12 THE WITNESS: That was Erin's
13 statement.

14 BY MR. BLIZZARD:

15 Q Okay. Did you agree with FDA on
16 that issue?

17 A Not necessarily, no.

18 Q Did you agree with it at all?

19 A I agreed that that was her view and,
20 based on what she had seen, that she had come
21 to that conclusion.

22 Q And she was acting on behalf of FDA
23 in coming to that conclusion; correct?

24 A Yes.

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

52

1 Q Do you see the next bullet says:
2 "Get very nervous when you tell us that you
3 are releasing product using the current
4 Quality Systems (open issues remain)."

5 Do you see that?

6 A Yes.

7 Q Were you nervous -- well, let me
8 stop you there.

9 Was there product still being
10 released by the Little Falls plant at this
11 period of time?

12 A As you pointed out earlier, the
13 PAREXEL consultants were engaged the end of
14 April. And at that point in time, we stopped
15 shipping product, end of April. But after
16 PAREXEL came in, they were reviewing product
17 by product. And some additional products
18 started to be released again based on the
19 PAREXEL review.

20 Q And this -- sorry. Go ahead.

21 A I believe her statement here, she
22 was referring to herself --

23 Q Right.

24 A -- that she gets nervous that we are

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

53

1 still releasing product.

2 Q And she's charged with making sure
3 that US citizens receive safe drugs; correct?

4 MR. DEAN: Objection; calls for
5 a legal conclusion.

6 Go ahead.

7 THE WITNESS: She's part of the
8 organization that does that.

9 BY MR. BLIZZARD:

10 Q Right.

11 A As a consumer safety officer, yes,
12 that's her job.

13 Q And then the next one, bullet point
14 says: "Do not fix broken Systems - get new
15 Systems. (I can't tell you what to do but
16 start from scratch)."

17 Do you see that?

18 A Yes.

19 Q So you agreed with her that the
20 system was broken and needed to be fixed?

21 A That's a very general statement. I
22 think there were definitely systems that
23 required some improvement. And there were
24 still systems, I think, in place that were

1 working. So I would have to say I would agree
2 perhaps on some of the issues and disagree on
3 others. It would have to be more specific.

4 Q Which parts of the quality system,
5 both quality assurance and quality control,
6 did you think were broken and needed to be
7 fixed?

8 A There were SOPs, I believe, that
9 needed to be perhaps put into more detail
10 regarding investigations and other things that
11 she had noted that were obviously not the ones
12 that weren't closed, et cetera, and some other
13 areas.

14 I would have to go back and really
15 look, but not -- when you referred to systems,
16 FDA's view is there's six systems; and she's,
17 I think, here not referring to the whole
18 entire company. She's referring to the
19 systems that she's looked at.

20 Q Right. And she's saying that
21 they're broken and need to be fixed and you
22 should start from scratch; right?

23 A That's her opinion, yes.

24 Q Right. And essentially did the

Phyllis A. Lambridis

79

1 Q And were there any other Patels that
2 were involved -- any family members of the
3 Patel family who stayed on after the
4 acquisition of Amide Pharmaceuticals and
5 worked for Actavis?

6 A I cannot recall her first name in
7 both cases. There was a sister with a
8 different last name -- she had a married name.
9 I can't remember what it was -- employed in
10 the legal department. And his mom, I think it
11 was Nila Patel. I'm not sure. She was
12 employed at the Little Falls facility in more
13 of an office manager's role.

14 Q Now, following the FDA inspection
15 and through the time that you worked at the
16 company, did any of these, the Patel family
17 members, stay on with the company?

18 A Up until I left, I believe the only
19 person that was still employed was the sister.

20 Q That was in the legal department?

21 A Correct.

22 Q Okay. Now, back at the time that
23 this inspection was going on in April of 2007,
24 did you communicate with Divya Patel about

1 what products should be fixed in what order?

2 A We talked about what products needed
3 to be addressed in terms of reintroduction
4 because we were discontinuing product as a
5 result of some of the activities.

6 We had some discussion about the
7 recalled products and what needed to be done
8 to enable us to market them. Again, that was
9 the initial part of that discussion.

10 Q And was Digitek among the recalled
11 products?

12 A Yes. Well, the first recall didn't
13 involve -- the first group of products that
14 were recalled, Digitek was not -- Digitek
15 stood alone. It was handled in a different
16 manner because we did not market that product.
17 It was marketed by another company.

18 Q Okay. And that other company was
19 Mylan?

20 A Correct.

21 Q So the recall that was done for
22 Digitek was handled separately because of
23 Mylan's involvement; correct?

24 A And because we had already committed

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

85

1 A Can you say that again, just repeat
2 it?

3 Q Let me ask a different question.
4 Do you see where it says "For the
5 products that we want to stop and fix" -- do
6 you see that?

7 A Yes.

8 Q -- "can you give me a first pass on
9 the order of priority that you would like them
10 assessed."

11 So were you asking these management
12 people to give you some idea of the priority
13 order for reassessing these products that you
14 were going to stop and fix?

15 A Yes. I can explain if I can just
16 put it into context.

17 Q Sure.

18 A At this point in time, there were,
19 as I had mentioned before, a group of products
20 that we were recalling. There were several
21 things going on. If you refer back to this
22 memo --

23 MR. DEAN: "This" being 107?

24 THE WITNESS: -- 107 exhibit,

1 we made some commitments to FDA to recall
2 product. And that was outlined in a memo
3 that was given to the Agency.

4 In addition to that, we
5 agreed -- because those recalls were full
6 recalls, so they involved taking all of
7 the product for those products off of the
8 market, they were affectionately known as
9 the stop-and-fix products.

10 So the plan at the time was
11 to -- at least we had stopped obviously
12 manufacturing and shipping them. And the
13 plan at the time was to evaluate them to
14 determine whether they would be
15 reintroduced and what would be needed
16 before they could be reintroduced.

17 And the reason for that is
18 because in some cases there were
19 method-related issues or issues that
20 could improve the product that may --
21 would require a lot of resources or FDA
22 review that would be a lengthy review.
23 So it was a business decision as to
24 whether they were worth spending the time

1 as opposed to spending that time and
2 resource elsewhere.

3 So that's the context of what's
4 there. So one of the things that we
5 presented to FDA, again back to the
6 Exhibit 107, on April 9th, the memo
7 that's referred to here, this FDA memo,
8 we committed to recalls of those
9 products; but we also were doing this
10 rationalization.

11 So that list consisted of the
12 products, these stop-and-fix products,
13 and then other products that we were, for
14 business reasons, most likely going to
15 discontinue, and then the products that
16 would remain.

17 BY MR. BLIZZARD:

18 Q Okay. I think I understand. So
19 what you're saying is there were these
20 products that the company was -- we're calling
21 stop-and-fix products, and digoxin was not a
22 stop-and-fix product?

23 A No.

24 Q But if you look at Exhibit -- if we

1 mentioned earlier, was a new building that we
2 were planning to move into.

3 So the context of that inspection
4 was to come in and give a preapproval of that
5 facility so that we could move into it. So
6 that's the preapproval part of it. And as
7 part of any preapproval inspection, they also
8 do a GMP inspection.

9 Q Okay. So what this was
10 originally -- was this originally a
11 preapproval inspection, but it turned into a
12 GMP inspection?

13 A It was originally a preapproval
14 inspection which would have included GMP, but
15 we -- she started doing the GMP portion of it,
16 and we never got to the preapproval portion of
17 it.

18 Q If you look over on the next page,
19 Page 2, you see where it says beginning on
20 the -- I guess it's the first full sentence on
21 that page, "The previous inspection"?

22 Do you see that sentence?

23 A Yes.

24 Q The previous inspection of the

1 Little Falls, New Jersey, facility provided
2 coverage of the quality, production,
3 laboratory control, materials and facilities
4 and equipment systems. Deficiencies were
5 documented in the areas of field alerts, the
6 stability testing program, and investigations.

7 And then the last sentence says:
8 Corrections were promised for all
9 observations. The inspection was classified
10 as -- is that a VAI?

11 A Yes.

12 Q What is VAI?

13 A Voluntary action indicated.

14 Q So that refers to a previous
15 inspection of the same facility; is that true?

16 A Actually, it's an inspection of the
17 Little Falls facility on Main Street, not the
18 Riverview facility, but it's all Actavis
19 Totowa.

20 Q Okay. So it was an inspection of
21 the Little Falls plant?

22 A Yes.

23 Q Were you involved at all in that
24 inspection?

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

111

1 A That inspection took place just
2 prior to my arrival, so it was in process when
3 I started with Actavis. And my only
4 involvement was to attend again the closeout
5 meeting that they held at the completion of
6 that inspection.

7 Q Did you actually -- were you
8 provided with any of the 483 materials so that
9 you could be familiar with the issues at the
10 plant going forward?

11 A Yes.

12 Q So you were familiar with what
13 findings had been made in 2006 regarding the
14 Little Falls facility in the 483 inspection?

15 A No. This was 2007. This inspection
16 that I'm referring to was September of 2007.

17 Q Okay. So did you know about an
18 inspection in 2006 of the Little Falls
19 facility?

20 A Yes.

21 Q And when did you learn about that?

22 A Actually, I was aware of it prior to
23 joining the company.

24 Q How so?

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

112

1 A Because they had been issued a
2 warning letter, and just normal surveillance
3 as part of my job. I know -- I keep up on
4 what's going on with other companies, and it's
5 in the news --

6 Q So was it --

7 A Trade press.

8 Q I'm sorry.

9 A Sorry. That's okay.

10 Q So that was part of your role as a
11 consultant or while you were working for
12 another company?

13 A No. It was just knowledge I had
14 prior to joining.

15 Q Okay. So you saw the warning letter
16 that was issued in 2006 to Actavis regarding
17 the Little Falls facility?

18 A Yes.

19 Q And that was as an industry
20 observer, I guess?

21 A Correct.

22 Q Did you do any further research on
23 that subject when you arrived at the company?

24 A No.

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

118

1 A Correct.

2 Q And then if you go down to the
3 middle paragraph that starts on April 9th, do
4 you see that?

5 A Yes.

6 Q On April 9th, a written commitment
7 was provided by yourself, and it shows it's
8 Exhibit 12. And it says in the middle of the
9 paragraph: "The letter also included a plan
10 to stop and remediate numerous
11 products/processes due to the current cGMP
12 findings."

13 Correct?

14 A Yes.

15 Q Is that the stop-and-fix list that
16 you talked about earlier?

17 A Yes.

18 Q And then it says at the last
19 sentence: The District was formally notified
20 of a probable Class I recall of digoxin
21 tablets, .125 milligrams, and then it gives
22 the lot number; correct?

23 A Correct.

24 Q Okay. Now, if you go over to

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

120

1 discuss the upcoming exit meeting; correct?

2 A Correct.

3 Q And then if you look at the top of

4 the next page, does it say there: "Both

5 Ms. Eyjolfsdottir and Ms. Lambridis

6 acknowledged the severity of the cGMP

7 deficiencies and stated the need for

8 corrective actions, restructuring of the

9 Quality Unit, and hiring"?

10 Do you see that?

11 A Yes.

12 Q And do you recall making that

13 admission?

14 A Yes.

15 Q And it was accurate and correct?

16 A Based on what was presented to us,

17 yes.

18 Q Right. And part of this, these

19 deficiencies involved the drug Digitek;

20 correct?

21 A Yes.

22 Q Now, if you'll go over to Page --

23 I'm going to skip a few pages now -- Page 15,

24 do you see there's a paragraph there that

22

23

24

[REDACTED]

Q Okay. Did you subsequently have any conversations with Mr. Wessman or Mr. Olafsson about the commitment to not produce any more digoxin until there was tableting equipment with weight controls?

A I was present during some of the discussions with senior management regarding Digitek. And the context of this was that they would not produce -- if they were going to move forward with digoxin, that they would want to purchase equipment with weight controls.

Q Okay. And I take it that there wasn't any existing equipment at the Little Falls or Riverview plant that was a press with weight controls; is that true?

A I'm not sure if there were none, but the presses -- majority of the presses there were not automated. So there might have been one. I'm not sure.

Q But there wasn't enough presses that were automated to produce digoxin with presses that were all weight controlled; is that true?

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

161

1

2

Q It says here that Chuck Koon and

3

Becky Pinnell had an informal conversation

4

with Dan Bitler, Actavis quality, regarding

5

the ongoing FDA inspection of the Little Falls

6

facility. And he's providing a brief summary

7

below; correct?

8

A Yes.

9

10

11

12

Q It says: The company has halted

13

production of all products at the Totowa

14

Little Falls, New Jersey, site.

15

Is that accurate?

16

A Yes.

17

18

19

20

21

22

23

24

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

164

1 Q Did any -- was there any attempt
2 that you're aware of to buy a new press with
3 appropriate weight control during the time
4 that you remained employed by Actavis?

5 A Not for Digitek.

6 Q Okay. Were there other automated
7 presses bought with weight controls that were
8 used to manufacture drugs other than Digitek
9 after the FDA inspection?

10 MR. DEAN: Objection.

11 Go ahead.

12 THE WITNESS: I can answer?

13 MR. DEAN: You can answer,

14 sure.

15 THE WITNESS: We did evaluate
16 that. I don't recall what was purchased
17 or if anything was purchased.

18 BY MR. BLIZZARD:

19 Q Okay. So you don't know one way or
20 the other?

21 A No.

22 Q In August of 2008, you were still
23 employed with the company?

24 A In August, yes.

1 Q And there were -- the remediation
2 effort or the effort on the corrective action
3 plan, was it still underway at that time?

4 A Yes.

5 Q And had some of the items on the
6 corrective action plan actually been
7 completed?

8 A Yes.

9 Q Were there others that were
10 incomplete in August of 2008?

11 A Yes.

12 Q Were there still significant
13 weaknesses within the quality department and
14 the quality system as of August of 2008?

15 A We were still in the process of
16 putting together a robust quality system to
17 inspect -- that would hold up to inspection.
18 So I think that there was still a lot of work
19 that needed to be done along those lines. I
20 don't know that I can say there were
21 weaknesses.

22 (Plaintiff's Exhibit No. 116
23 was marked for identification.)

24

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

173

1 That's a miscategorization of
2 that sentence.

3 BY MR. BLIZZARD:

4 Q Does the sentence say: They -- "The
5 quotes they lifted are in every warning letter
6 and recall press release"?

7 A Yes.

8 Q And in the second paragraph, is
9 there a quote there that says: Actavis said
10 August 1 that it is recalling all 65 products
11 manufactured at the plant following an
12 inspection that, quote, revealed operations
13 which did not meet the FDA's or Actavis'
14 standards for good manufacturing processes?

15 Did I read that correctly?

16 A Yes.

17 Q And do you agree that the inspection
18 by FDA did reveal operations which did not
19 meet the FDA or Actavis' standards for good
20 manufacturing practices?

21 A Yes. But that is also a standard
22 statement that is in most recall notices.

23 Q Well, is that something that you
24 think the public should be entitled to know?

1 1267772.

2 Do you see the first e-mail here is
3 from Tony Delicato to Erislandy Dorado with a
4 carbon copy to you and Chris Young?

5 A Yes.

6 Q And it's dated September 16 of 2008;
7 is that right?

8 A Yes.

9 Q And then the subject says: "These
10 are just examples - not all - inclusive."

11 Is that what it says?

12 A Yes.

13 Q And it says: Quality unit
14 responsibilities SOP outdated/not accurate.

15 Do you know what that refers to?

16 A There was an SOP, a standard
17 operating procedure. And the one that was in
18 place did not reflect what was -- what we
19 wanted to have going forward, so it needed to
20 be revised.

21 Q Then it says: Quality review
22 board - SOP effective but no meetings held as
23 functional areas have not had time to generate
24 metrics.

272

1 professionals in multiple industries, not just
2 in pharmaceuticals.

3 Q There is the phrase "visual
4 inspection" in some of these documents, "AQL,"
5 and "tightened AQL." For this particular
6 investigation, 07-093, of this particular
7 batch, can you tell me, was there a visual
8 inspection, was there an AQL, and was there a
9 tightened AQL? Were there all three?

10 A There was a visual inspection and a
11 tightened AQL. There's typically a normal AQL
12 for the release. But that was -- I don't -- I
13 didn't review that, so I can't say for sure.

14 But that would typically happen at
15 some point during the manufacture of the batch
16 in order to get that batch through to the
17 point where it would be packaged and released.
18 So it may be in the regular batch
19 documentation, which I don't have in front of
20 me.

21 Q So now I'm not talking about this
22 particular investigation, but there could be
23 such a thing as a visual inspection and then
24 an AQL and then a tightened AQL? Is that

1 possible, generally speaking?

2 MR. DEAN: On one batch; right?

3 MR. PETTIT: On one batch, yes.

4 THE WITNESS: Under normal

5 circumstances, there's an AQL and the

6 batch is released. Because this batch

7 identified a problem -- in any batch that

8 identifies a problem, it is possible that

9 they would do a visual inspection and

10 then another AQL before they release it.

11 BY MR. PETTIT:

12 Q So it is possible that you could
13 have a visual and an AQL and a tightened AQL;
14 that's possible?

15 A Yes, but not in that order.

16 Q What would the order be?

17 A It would be AQL, visual inspection,
18 tightened AQL.

19 Q And the decision to have a tightened
20 AQL would be made by whom, generally, at
21 Actavis in 2007?

22 A It would typically be done by -- at
23 Actavis it would be done by the director of
24 QA, but it's standard practice. It should be

1 that there was a total failure of the quality
2 department at Actavis during the inspection of
3 2008?

4 A It's a little out of context, but I
5 believe the discussion was whether or not I
6 agreed to it in a conversation with Erin
7 during the closeout -- or during a meeting
8 with Erin.

9 Q Did you, as the vice president of
10 quality and compliance, during the FDA 483 in
11 2008 believe that there was a total failure of
12 the quality control system at Actavis? And
13 when I say that, I mean Little Falls and
14 Totowa.

15 A We didn't present ourselves well to
16 FDA, for sure. So it was very hard for me to
17 disagree with Erin during our discussions
18 because based on what she had reviewed, there
19 were numerous issues that she was able to
20 raise that, again, needed attention.

21 So, again, based on -- in the
22 context of what we were talking about and
23 based on the issues she presented, it was
24 not -- it was something that I couldn't

1 refute.

2 Q Do you believe, as you sit here
3 today, that if all the findings were presented
4 in a different manner, that the production of
5 64 products would not have been discontinued?

6 A I don't understand the question.

7 Q Are you telling me that it was the
8 way that the violations were presented or the
9 inspection was presented that would have
10 classified it as a total failure of QC?

11 A No. What I'm saying is that she
12 reviewed a group of products that were
13 known -- already known issues that -- and the
14 reason that she focused on those is because we
15 had already informed the Agency that we had a
16 problem.

17 So when you're only looking at a
18 problem, your conclusion -- her conclusion was
19 then broadened to include everything. And her
20 comments were based on a sampling of the many
21 products that Actavis was making at the time.

22 Q So it's your belief that because she
23 found issues with certain products, that it
24 didn't carry over to other products?

1 A Say that again.

2 Q Well, you were indicating that
3 Actavis stated that there were problems with
4 certain products, and those were the products
5 that they investigated?

6 A There's a mechanism and a
7 requirement that if you have an issue -- if
8 you do an investigation on a product that's
9 been marketed, that you have an obligation to
10 notify FDA.

11 So there were a number of -- and
12 even without that, every FDA inspection, when
13 they look at the quality system, it typically
14 asks you for documents related to your
15 investigations, your complaints, and so forth.
16 And they use that as a gauge for what they're
17 going to look at. So they come in, and she
18 was looking at our investigation log and
19 looking at investigations specifically. So
20 obviously she was going to be looking at
21 problem areas.

22 Q But you agree with me that it wasn't
23 so much the investigation that led to the
24 violations of GMP but how the investigations

1 were handled?

2 A Correct. She was not happy with how
3 certain ones were handled. And how we got to
4 it broadening beyond that was the fact that
5 she focused on a certain number of products
6 and then drew her conclusions based on that.

7 Q At the time of the inspection,
8 Actavis was manufacturing 64 products; is that
9 correct?

10 A I don't recall the number, but there
11 was at least that.

12 Q Okay. And at least that and my list
13 is including the Digitek. And my question is:
14 You agree that 64 products, including Digitek,
15 were discontinued because the quality control
16 system at Actavis had several failures?

17 A I'm trying to find a short way to
18 answer that. One thing led to another is the
19 easiest way for me to say that. We talked
20 earlier about PAREXEL's review and discussions
21 that occurred with the Agency even prior to
22 the inspection closing.

23 So Erin looked at a number of
24 products that were subject to investigations

1 and was drawing conclusions and was asking us
2 to prove to her that that wasn't the case with
3 all products.

4 So that was why we had engaged
5 PAREXEL. That was to get a third-party,
6 unbiased review of these other products so
7 that we could provide that evidence to the
8 Agency to show them that the issue was not
9 widespread.

10 Q But ultimately the FDA concluded
11 that the issue was widespread?

12 A Based on Erin's comments, yes.

13 Q Based on the FDA inspector's
14 comments?

15 A Right.

16 Q And did you find any fault with the
17 FDA inspector's comments?

18 A I -- there were things that we did
19 disagree on. But her comments were basically
20 accurate, you know -- yes, her comments were
21 accurate. What she presented was accurate.

22 Q As you sit here now, anything -- do
23 you recall anything specifically that you
24 disagreed with the FDA inspector as far as her

1 findings during the 483?

2 A Fundamental issues. I mean, Erin is
3 a very good investigator, very thorough, but
4 she has her own opinions, like anybody does.
5 So she had feelings about things that we
6 implemented that perhaps were given the
7 go-ahead by prior FDA investigators that
8 perhaps she felt differently about.

9 So there were things that were
10 discussed during the course of the
11 investigation that I viewed one way and she
12 viewed another, but that's not unusual.

13 Q Can you think of any specifics, any
14 issues or topics that she viewed one way and
15 you viewed another?

16 MR. DEAN: I've been letting --
17 let me just object. I'll try to be
18 succinct here. I've been letting the
19 general inquiry about non-Digitek
20 products go at a general level.

21 I don't object to her answering
22 that question as to Digitek specifics.
23 But as to general details -- I'm sorry --
24 as to specific details of discussions she

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

294

1 had with Erin about non-Digitek products,
2 I'm going to instruct her not to answer
3 the question as to details.

4 I might at a general level if
5 you're inquiring about whether there was
6 a concern about quality control; but as
7 to the specifics, I'm going to instruct
8 her not to answer on non-Digitek
9 products.

10 BY MR. MILLER:

11 Q Were there any specifics that you
12 recall that you disagreed on from the findings
13 of the FDA inspector during the '08 483
14 inspection?

15 MR. DEAN: Let me just instruct
16 you just to answer that with respect to
17 Digitek.

18 BY MR. MILLER:

19 Q And I'll point out that you can
20 answer with respect to Digitek or any general
21 GMP violations. It can be general issues or
22 Digitek. It doesn't have to be just Digitek.

23 MR. DEAN: At a general level,
24 I'm fine. But if you're asking her for

1 specific comments about non-Digitek
2 drugs, I think that is beyond the scope
3 of what's in PTO-12 and 27. If you're at
4 a general level, I'm okay with it. But I
5 think your last question could lead her
6 to go into specifics. And I'm just
7 instructing her, as to specifics, to
8 limit it to Digitek.

9 BY MR. MILLER:

10 Q If you understood all those
11 instructions, ma'am, it's okay to answer.

12 A I think I can answer it. In the
13 case of Digitek and with some of the other
14 drugs that were recalled, I didn't always see
15 the logic in extending it to all batches. And
16 that doesn't mean that I didn't execute on all
17 batches because there was -- when you're
18 dealing in a situation as I was in, you get to
19 a point where you just -- in order to advance
20 to the next point and not belabor the point,
21 there's certain concessions that are made.

22 So in the case of some of the other
23 recalls, which based on his instruction, I'm
24 not going to give you the detail, but there

1 were situations where there was an issue with
2 one batch and, through her interpretation, it
3 implicated all batches.

4 Q How many -- I'm sorry.

5 A And I didn't always agree with that.

6 Q How many of the 64 products, give or
7 take -- I understand your position there --
8 were ultimately recalled?

9 A All the products were recalled.

10 Q And was that every batch in every
11 product?

12 A Yes.

13 Q So --

14 A But there were multiple recalls, so
15 you have to distinguish one from the other.
16 There was a set of recalls that was done
17 initially for stability-related issues. Those
18 are the ones that I'm referring to now when I
19 say that one batch with a problem, even though
20 it was a stability batch, to me did not always
21 mean or based on -- based on the issue --
22 again, I can't go into detail.

23 But her view was that it should have
24 been all batches based on that, and my view

1 was that I didn't believe that was the case.

2 But I didn't argue that point. I conceded

3 that point, and we recalled everything.

4 The 65 products that you're

5 referring to is part of the last recall. And

6 that recall, again, was a concession to remove

7 product from the market in order for Actavis

8 to even have a discussion with the Agency

9 about next steps and getting their site back

10 into a position where they can manufacture

11 product.

12 Q Okay. Sixty-five products was the

13 last set?

14 A Was the last set.

15 Q How large were the other sets? I

16 thought 65 was the total universe of products

17 at Actavis, Little Falls, Totowa?

18 A I don't recall, but I don't think

19 so. I think 65 was the last set.

20 Q And, in your mind, Digitek was one

21 product that was recalled on its own set?

22 A Correct.

23 Q Okay. And then there was a -- was

24 the stability recall, was that the group of 65

Phyllis A. Lambridis
Confidential – Subject to Further Confidentiality Review

298

1 or was that a subset of the 65?

2 A The stability group was the first
3 set of recalls around the same time frame as
4 the digoxin recall. And I don't recall if --
5 I think it was about a dozen products.

6 Q Was there also an
7 out-of-specification group, an OOS group?

8 A That's the stability group.

9 Q That's the stability. Okay. Am I
10 correct in saying that if a manufacturing
11 company of pharmaceutical products violates a
12 CGMP, that it's viewed that the lab has
13 violated that CGMP for all products?

14 MR. DEAN: Objection to form.

15 Go ahead.

16 THE WITNESS: I don't
17 understand the question.

18 BY MR. MILLER:

19 Q Have you seen -- I'm going to hand
20 you what's been previously marked, if you
21 bring up, Mike, a copy of Exhibit 82, which
22 was the Complaint for permanent injunction.

23 Have you seen this document before?

24 A Yes.

1 Q And what was the occasion which you
2 had an opportunity to read it?

3 MR. DEAN: Let me just instruct
4 the witness she can answer questions at a
5 general level about this document; but,
6 again, given PTO 12 and 27, I don't want
7 her to get into specific discussions of
8 products other than Digitek. But she can
9 answer your questions at a general level
10 regarding this document.

11 Go ahead.

12 BY MR. MILLER:

13 Q Well, this document was filed, if
14 you look at the last page, on November 14th,
15 2008. And you were in your position as vice
16 president of quality and compliance at Actavis
17 at that time; correct?

18 A No. I resigned on the 13th. This
19 document was filed but not in this form.

20 This is the final consent decree?
21 Is that what I'm looking at?

22 Q No, ma'am. This is the Complaint
23 that led to the consent decree.

24 A Oh, this is the Complaint.

1 manufactured at this time would be considered
2 adulterated drugs?

3 MR. DEAN: Objection to form.

4 Excuse me. What drugs are you asking
5 about? I want to be more specific.

6 MR. MILLER: Drugs manufactured
7 by Actavis at Little Falls and Totowa.

8 MR. DEAN: And your question is
9 what?

10 BY MR. MILLER:

11 Q Would you have considered -- did
12 you, as the vice president of quality and
13 compliance, agree with the Department of
14 Justice that the drugs manufactured were
15 adulterated drugs?

16 MR. DEAN: Objection; calls for
17 a legal conclusion.

18 Go ahead.

19 Go ahead.

20 THE WITNESS: Answer it?

21 I wouldn't agree that -- no, I
22 don't agree with the Department of
23 Justice. I believe that there were
24 issues involved with certain batches with

1 certain products that may have violated
2 GMP and may have had issues, but I don't
3 agree that all the drugs manufactured.

4 BY MR. MILLER:

5 Q Were GMPs violated in the production
6 of Digitek?

7 A Technically, no. They followed
8 standard practices. They did an
9 investigation. They did all the necessary
10 things that they should have done.

11 I think it was a judgment call
12 perhaps on the amount of scrutiny that they
13 put that batch through after finding such an
14 issue. And it's always easy to look at it in
15 hindsight and think of 50 other things you
16 should have done.

17 But there was nothing related to
18 that -- the only thing that I can -- they
19 followed procedures that were in place. There
20 was a mechanism in place. It was not done
21 randomly.

22 Q I understand your answer to go
23 specifically to the double-thick pills.

24 A Correct.

1 Q And I'm more of a broader question.
2 The production of Digitek, if one were to
3 review the 483 and all the write-ups, you
4 agree that there were other write-ups about
5 digoxin and Digitek other than the
6 double-thick pills?

7 A I don't recall. I thought the
8 majority of what was there was related to the
9 one batch, but I don't know. Without seeing
10 that, I couldn't comment.

11 Q All right. We'll certainly cover
12 that as well.

13 Mike, would you blow up

14 Paragraph 12, please.

15 FDA's inspections establish that the
16 drugs being manufactured and distributed by
17 Defendants are adulterated within the meaning
18 of 21 USC 351, Paragraph (a)(2)(B), in that
19 the methods used in, or the facilities or
20 controls used for, their manufacture,
21 processing, packing, or holding do not conform
22 to or are not operated or administered in
23 conformity with the GMP requirements for
24 drugs.

Phyllis A. Lambridis
Confidential – Subject to Further Confidentiality Review

305

1 So --

2 MR. DEAN: Let me just -- is
3 that just -- you're reading the question,
4 and you're going to ask if you read it
5 right? Or do you have a question?

6 MR. MILLER: You cut me off
7 before I even got a chance to ask a
8 question, Dick.

9 MR. DEAN: Go ahead and ask
10 your question.

11 BY MR. MILLER:

12 Q Did I read that correctly?

13 A Yes.

14 Q And it's your testimony here that
15 you disagree with that, or do you agree with
16 that paragraph?

17 MR. DEAN: Let me object and
18 reiterate the objection I gave before and
19 instruct her not to answer about details
20 of other non-Digitek drugs. She can
21 certainly answer about Digitek, and she
22 can answer at a general level.

23 Go ahead.

24 THE WITNESS: To me, this

1 paragraph just states what FDA does. FDA
2 inspections establish that. It doesn't
3 speak specific to Actavis. It's just
4 stating that.

5 BY MR. MILLER:

6 Q Well, you're not an attorney;
7 correct?

8 A I'm not an attorney.

9 Q If you go to that first page, ma'am,
10 this is a Complaint that the United States of
11 America filed against Actavis Totowa and other
12 defendants.

13 And enumerated Paragraph 12 is:
14 "FDA's inspections establish that the drugs
15 being manufactured and distributed by
16 Defendants are adulterated."

17 It's not what the -- I'll represent
18 to you that it's not what the FDA does. It's
19 not explaining a duty. It's explaining a
20 finding that if methods used or facilities or
21 controls used for their manufacture,
22 processing, packing, or holding do not conform
23 to or are not operated or administered in
24 conformity with the CGMP requirements for

1 drugs, what they've done is defined what an
2 adulterated drug is.

3 Do you understand the paragraph,
4 ma'am?

5 MR. DEAN: Same objection. She
6 can answer with regard to Digitek.

7 I instruct you not to answer as
8 to the specifics on other drugs.

9 Go ahead.

10 THE WITNESS: I'm sorry. Now
11 that I'm rereading the paragraph, can you
12 ask me the question again?

13 BY MR. MILLER:

14 Q Certainly. Do you feel that you
15 understand the paragraph now?

16 A Now I understand the paragraph, yes.

17 Q Had you received training in CGMPs
18 as a vice president of quality and compliance?

19 A Yes.

20 Q Are you familiar with US -- with
21 21 USC 351 (a) (2) (B)?

22 A Actually, not specifically. I
23 couldn't tell you what that reference is in
24 detail. GMPs are Sections 210 and 211 cited

1 use to manufacture is how you manufacture
2 that drug.

3 And there's a formulation
4 that's associated with a certain drug.
5 And not all drugs are produced with the
6 same formulation or the same process.

7 BY MR. MILLER:

8 Q You would disagree with the
9 statement that if a quality control system
10 department of a pharmaceutical lab had a GMP
11 violation in stability, that that general GMP
12 violation doesn't carry over to stability for
13 all products?

14 A Still, it's not -- it would depend
15 on the case. You're -- you can have a
16 stability issue or a problem with -- it would
17 vary -- you'd have to be more detailed to
18 that.

19 Q As we sit here, you're not aware of
20 any GMP violations on Digitek in particular?

21 A No, I'm not aware of any on Digitek
22 in particular.

23 Q Let's go to Page 7 of the Complaint,
24 Paragraph 16.

1 Blow that up, please.

2 Paragraph 16 states that the FDA's
3 inspection of Actavis Totowa's Little Falls
4 facility from January 10 to February 8, 2006,
5 revealed that the firm failed to comply with
6 GMP requirements in several respects,
7 including, for example, it failed to
8 investigate unexplained out-of-specification
9 testing results for drugs, specifically
10 21 CFR 211.192.

11 And my question is: Do you agree
12 that failing to investigate unexplained
13 out-of-specification testing is a violation of
14 CGMP?

15 MR. DEAN: Objection; calls for
16 a legal conclusion.

17 Go ahead.

18 THE WITNESS: Yes, it is a
19 violation.

20 BY MR. MILLER:

21 Q If we go to Page 10 and take a look
22 at Paragraph 21, the Complaint by the
23 US Department of Justice goes on to say that
24 from March 18 to May 20th, 2008, FDA inspected

1 Actavis Totowa's Riverview Drive facility.
2 Throughout the inspection, the FDA
3 investigators advised defendants of the
4 numerous and significant deviations from the
5 CGMP requirements that the investigators
6 observed so the firm could take responsive
7 actions to protect the public health.

8 Ma'am, you would agree that you were
9 part of the conversations in which the FDA
10 investigators advised Actavis of the numerous
11 and significant deviations from CGMP?

12 A Yes.

13 Q And do you agree that there were
14 numerous and significant deviations from CGMP
15 during the March 18th to May 20, 2008,
16 inspection?

17 A Yes, I would have to agree.

18 MR. MILLER: Would you call up
19 Exhibit 91.

20 BY MR. MILLER:

21 Q That first page -- we've gone over
22 this document in some detail. I'm going to
23 make a very good attempt not to ask questions
24 that have already been asked, although I'm

1 GMP inspection," would they look at good
2 manufacturing practices -- if they look at,
3 say, stability and the amount of time that you
4 have in this field, will they go through and
5 qualify GMP stability for every product or do
6 they qualify stability for one or two
7 products? They wouldn't go through 64

8 products? -- is my question.

9 A Correct.

10 Q So there's a general term there
11 where, okay, three or four products or
12 whatever number it might be are approved for
13 GMP for stability, or any other example, then
14 it's approved across the board; is that
15 correct?

16 A They look at the system itself, and
17 they use a sampling of the products to
18 determine if that system's working.

19 Q Would you agree with me that when
20 they look at the system, again, they look at
21 stability; they don't look at stability for
22 each and every of the 64 products; is that
23 correct?

24 A Correct.

1 Q And does the counterpart hold true?
2 When they come in to inspect, they won't
3 inspect every product's stability testing;
4 they'll inspect a couple and then say you
5 violated the GMP for stability across the
6 board; is that correct?

7 MR. DEAN: Objection.

8 Go ahead.

9 THE WITNESS: If it's not
10 specific to a product, yes, then that
11 would be true. So if they found a
12 problem that was related specifically to
13 one product, then you couldn't make that
14 assumption. But if they found a general
15 problem, then you could.

16 BY MR. MILLER:

17 Q Would you describe a general
18 problem? If they found GMP violations in
19 three or four products out of 64, that then
20 does it become a general problem?

21 MR. DEAN: Objection;
22 incomplete hypothetical.

23 BY MR. MILLER:

24 Q It's okay to answer.

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

320

1 before it is an across-the-board, general
2 problem?

3 MR. DEAN: Objection to form;
4 vague, ambiguous; lab system's undefined,
5 numerous other terms undefined. The
6 question is vague and ambiguous.

7 BY MR. MILLER:

8 Q It's okay to answer.

9 MR. DEAN: Go ahead if you can.

10 THE WITNESS: I forgot the
11 question.

12 BY MR. MILLER:

13 Q Using your term, "laboratory
14 system," stability testing falls under
15 laboratory systems, which we have established.
16 And you indicated that one would be a problem
17 with that product, and you also indicated that
18 "multiple" would be an indication of
19 across-the-board problem.

20 My question is: How many?

21 A How many? There's no definitive
22 number.

23 And just to clarify, in this
24 particular case, we had multiple stability

1 failures that led to recalls and those
2 products were recalled; but they were
3 product-related because, generally speaking,
4 the lab got a clean bill of health in this
5 inspection, for the most part. That was the
6 area that they praised in terms of labs. So
7 the fact that the lab found the out-of-specs,
8 I mean, it went to their credit.

9 If you recall, you put something up
10 a few minutes ago that criticized the company
11 from the prior inspection, whereby they were
12 not opening any investigations. And you asked
13 me if that was a violation of GMP, and it is.

14 So the company had come quite a ways
15 in that they were opening these
16 investigations. Now, of course, they were now
17 cited for failing to close them in a timely
18 fashion, but it was a new problem. It was a
19 related problem.

20 But now the company was -- the
21 laboratory was actually given kudos for the
22 fact that it had done well during this
23 inspection, despite the stability failures
24 because they were product-related. They were

1 related to either an issue with a product or a
2 batch or a method or something, something
3 else.

4 MR. MILLER: Let's go to Page 2
5 of 95. And blow up the last five lines.
6 There's a sentence that begins with
7 "however."

8 BY MR. MILLER:

9 Q And if you could start, read
10 whatever you need to catch up. But it begins
11 with "However," the bottom of the page, four
12 or five lines up from the bottom.

13 And it says regarding this
14 inspection: However, there is no assurance of
15 the strength, quality and purity of the
16 approximately -- redacted number -- of other
17 products that remain on the market, all lots
18 remaining in the two distribution centers, and
19 the in-process products that remain at the
20 firm's Little Falls, New Jersey, and Totowa,
21 New Jersey, locations. The products were
22 manufactured, tested and released by the same
23 quality system.

24 Now, do you find praise in that --

Phyllis A. Lambridis

328

1 Go ahead.

2 THE WITNESS: You asked
3 something specific to digoxin.

4 MR. DEAN: He changed the
5 question.

6 MR. MILLER: I did because I
7 forgot the first one. You're going to
8 get me to forget the second one if you
9 don't give me an answer.

10 MR. DEAN: Why don't you try
11 again.

12 BY MR. MILLER:

13 Q As the vice president of quality and
14 compliance at Actavis for a large area but
15 speaking to Totowa and all the products that
16 manufacturing of was ceased, were all the
17 products terminated because of violations of
18 GMPs?

19 MR. DEAN: Objection.

20 Go ahead.

21 THE WITNESS: When we ceased
22 manufacturing? You're referring to the
23 cease of manufacturing?

24

1 BY MR. MILLER:

2 Q Yes.

3 A The products -- we discontinued
4 manufacturing because Erin raised the concern
5 regarding the fact that she couldn't -- she
6 reviewed certain products and she had issues.
7 And she extended that across the board and
8 asked us to provide her with evidence to the
9 contrary.

10 So in the absence of being able to
11 present her now with evidence for every
12 product, that it was -- that a review had been
13 done and that it was good, we ceased
14 manufacturing. And that's when we called
15 PAREXEL in to do that review so that we could
16 provide that to her.

17 Q And whether or not double-thick
18 tablets were found in Digitek, production
19 would have ceased on Digitek just the same?

20 MR. DEAN: Objection; misstates
21 the prior testimony.

22 Go ahead.

23 MR. MILLER: I'm not stating
24 any prior testimony.

1 BY MR. MILLER:

2 Q My question is: If double-thick
3 tablets had never been discovered in any
4 Digitek lot or batch, would you agree that
5 production line would have stopped just the
6 same?

7 A It would have been part of that
8 group of products. Whatever we were
9 manufacturing was stopped. So Digitek -- even
10 if she never found an issue with Digitek,
11 that's what you're asking?

12 Q Yes.

13 A If she never found any issue with
14 Digitek, that would have been stopped with all
15 the others.

16 Q No. I'm talking about that specific
17 issue. There were several issues. I guess
18 that specific issue of double-thick tablets,
19 had that not been found, the production of
20 Digitek still would have ceased?

21 A Yes, because we ceased everything.
22 So it would have been included in the whole
23 group.

24 Q And the whole group ceased because

1 of significant GMP violations?

2 A She found CGMP violations with
3 respect to certain things that she had looked
4 at and extended it across the board. And it
5 was up to -- she was asking us to prove
6 otherwise. So we had to stop in order to
7 evaluate and provide that information.

8 Q And her findings came in the way of
9 observations in the 483?

10 A Yes.

11 Q And it was those observations in the
12 483 and violations of the GMP written in that
13 document that led to the cease of production
14 of all products; you agree with that?

15 A Yes, even though we ceased before
16 actually having the official 483.

17 Q Page 43 of 95, please.

18 And you agree that one group of
19 production recalls were due to stability, but
20 you agree that that was also -- included
21 out-of-specification results; is that correct?

22 MR. DEAN: Can I have that
23 question again? I'm sorry.

24 MR. MILLER: Well, yeah, I

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

337

1 A Correct.

2 Q If it was some other product that
3 they make, even if they had said by way of
4 example oxycodone hydrochloride tablets and
5 that was the example, it wouldn't matter
6 because the violation is a general violation
7 that's outlined at the top; right? So it
8 wouldn't have mattered to you --

9 A She's pointing out, yeah, what she
10 observed to be a violation.

11 Q I understand. And if you take a
12 look at Page 45 of 95, now, this issue, this
13 out-of-specification issue goes to -- am I
14 correct in using the term "blend uniformity"?

15 A In the last example?

16 Q Yes.

17 A Yes.

18 Q And blend uniformity is where you're
19 testing to see if the amount of active
20 pharmaceutical ingredient has dispersed evenly
21 in the mixture; is that a good way to put it?

22 A That's a good way to put it.

23 Q And "out of specification" means
24 that a sample that they took did not have the

1 proper amount of active pharmaceutical
2 ingredient?

3 A It could mean that, but there are a
4 lot of -- there's a lot of debate about the
5 sampling technique playing a role in whether
6 you get an accurate result.

7 Q But as a manufacturer of a product
8 and vice president of quality, you do have
9 limits set high and low of how much active
10 pharmaceutical ingredient can be in a blend
11 uniformity test?

12 A It has to meet the criteria for the
13 finished dose.

14 Q Right. And in this example, it was
15 Digitek that did not have the right amount of
16 digoxin in the test sample; is that correct?

17 A If I can just look at this one more
18 time.

19 Q Certainly.

20 A I don't know all the details here,
21 but -- it's hard to do this with the redacted
22 version. What was the question again?

23 Q Certainly. It discusses a Right-Top
24 sample. You saw that?

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

341

1 A -- it's a valid result.

2 Q But ultimately you'd agree that the
3 CGMP violation that the FDA inspector found to
4 summarize all this was determinations of
5 conformance to appropriate written
6 specifications for acceptance are deficient
7 for in-process materials?

8 MR. DEAN: Object to the form
9 as to "found."

10 Go ahead.

11 THE WITNESS: Her concern here
12 was that this issue didn't extend to
13 looking at the manufacturing process.
14 She's criticizing the fact that a
15 manufacturing investigation wasn't
16 conducted in this instance and that --
17 but it appears, in looking at the rest of
18 this, that there were -- there was some
19 type of investigation related to the
20 laboratory and additional samples were
21 tested.

22 BY MR. MILLER:

23 Q Would you --

24 A As I said, unless I read this whole

Phyllis A. Lambridis

356

1

2

3

4

5

Q But as a result of the inspection,

6

you agree that all products were recalled at

7

Totowa?

8

A Eventually.

9

10

11

12

13

14

15

16

17

19

20

21

22

23

24

1 anything else going on in the inspection
2 except that they were not happy with what
3 they had seen so far.

4 And so when the Digitek one
5 came along, they took a harsher approach
6 in looking at it and most likely due to
7 the nature of the product, but that's
8 just my opinion.

9 BY MR. MILLER:

10 Q Did they also take a harder look
11 because of the significant GMP issues that
12 were going on in the laboratory?

13 A Her -- no, it had nothing to do with
14 the laboratory.

15 Q I'm sorry. Strike that.

16 A This particular observation had
17 absolutely nothing to do with the laboratory.

18 Q Let me rephrase the question.

19 You agree that there were
20 significant GMP deficiencies found in the
21 quality control system?

22 MR. DEAN: Objection. That's
23 been asked and answered about ten times.

24 MR. MILLER: Well, I'm trying

Phyllis A. Lambridis

Confidential – Subject to Further Confidentiality Review

362

1 about --

2 A Now ask me the question again.

3 Q I'll start the same way I started
4 last time.

5 The other products, the other 64 or
6 65 products, they were subject to a quality
7 control system that had significant
8 deficiencies with GMPs; correct? Do you agree
9 with that?

10 A That was the view that FDA took.

11 Q What's different about Digitek? Why
12 is Digitek not lumped in with those other 65
13 products?

14 A Because of the time frame that
15 you're talking about. Digitek was in April,
16 and the 65 products was in July.

17 Q I'm talking about the findings of
18 the 4 --

19 MR. DEAN: Let her finish.

20 THE WITNESS: In April, we had
21 no intention of recalling the other 65
22 products. In April, it was our intention
23 to do the review by PAREXEL of the
24 remaining products and be able to defend

1 everything back. That's the story. I'm
2 sorry. I get -- I spent ages and ages trying
3 to defend it, and we brought it all back
4 anyway. So I'm very passionate about this
5 topic.

6 BY MR. MILLER:

7 Q It is your testimony today that up
8 to April 24th of 2008, the only product that
9 was being discussed to be recalled was
10 Digitek?

11 A No. It was Digitek and several of
12 the stability-related out-of-spec products.
13 And there's documentation with dates and
14 commitments. And I put everything in writing,
15 so it should be here somewhere, the exhibits
16 that are referred to.

17 MR. MILLER: That's all the
18 questions I have.

19 MR. DEAN: I've got a few
20 questions.

21 THE VIDEOGRAPHER: We should
22 probably go off the record, and I'll give
23 you a new clip.

24 MR. DEAN: Oh, please. That

CERTIFICATE

I HEREBY CERTIFY that the
witness was duly sworn by me and that the
deposition is a true record of the testimony
given by the witness.

It was requested before
completion of the deposition that the witness,
PHYLLIS A. LAMBRIDIS, have the opportunity to
read and sign the deposition transcript.

KIMBERLY A. OVERWISE
Certified Realtime Reporter
Notary Public
Dated: January 29, 2010

(The foregoing certification of
this transcript does not apply to any
reproduction of the same by any means, unless
under the direct control and/or supervision of
the certifying reporter.)

1 INSTRUCTIONS TO WITNESS

2
3 Please read your deposition over
4 carefully and make any necessary corrections.
5 You should state the reason in the appropriate
6 space on the errata sheet for any corrections
7 that are made.

8 After doing so, please sign the
9 errata sheet and date it.

10 You are signing same subject to the
11 changes you have noted on the errata sheet,
12 which will be attached to your deposition.

13 It is imperative that you return the
14 original errata sheet to the deposing attorney
15 within thirty (30) days of receipt of the
16 deposition transcript by you. If you fail to
17 do so, the deposition transcript may be deemed
18 to be accurate and may be used in court.

ACKNOWLEDGMENT OF DEPONENT

I, PHYLLIS A. LAMBRIDIS, do
hereby certify that I have read the foregoing
pages, 1-396, and that the same is a correct
transcription of the answers given by me to
the questions therein propounded, except for
the corrections or changes in form or
substance, if any, noted in the attached
Errata Sheet.

PHYLLIS A. LAMBRIDIS
